MISSION STATEMENT

We find it outrageous that millions of people worldwide work in environments where the air is heavily contaminated.

They deserve better and so do their employers, our customers. We are on a mission to help businesses everywhere clean the air with our knowledge and solutions to effect sustainable improvements.

It's not just about meeting rules and regulations. We know that clean air is key to healthy growth for both people and businesses.

Absolent AIR CARE GROUP

WHO WE ARE

Filtermist Limited, part of the Swedish Absolent Air Care Group, has been established for over 50 years and is the UK market leader for oil mist extraction. Our UK made oil mist filters are trusted by world leading manufacturers in more than 60 countries in industries ranging from aerospace and automotive, to food processing and medical device manufacture.

Our company has diversified in recent years by extending the products and services we offer through both organic growth and targeted acquisitions. In addition to Filtermist oil mist filters, Filtermist Limited is responsible for manufacturing Dustcheck dust control and dust extraction equipment, and Kerstar industrial vacuum cleaners.

Filtermist Limited is also the UK distributor for sister company Absolent AB as well as other extraction equipment suppliers, and provides a UK wide installation and maintenance service, as well as COSHH compliant LEV Testing for all makes and models of LEV systems.

WHAT DOES FILTERMIST'S AFTERMARKET DEPARTMENT OFFER AND WHY?

Is the air in your workplace clean and safe to breathe?

The Control of Substances Hazardous to Health (COSHH) Regulations 2002 make it a legal requirement to protect employees from harmful airborne contaminants.

How do you protect your employees?

Local Exhaust Ventilation (LEV) is widely acknowledged as the most effective control measure for airborne contaminants such as oil mist particles, dust and fume.

How do you ensure that your LEV system is safe?

We offer a variety of aftermarket services to guarantee that your LEV systems operate properly:

- ✔ LEV Testing
- ✔ Air Monitoring and Sampling
- ✔ Servicing and Maintenance
- ✔ Critical Spares and Consumables
- ✔ Emergency 24-hour breakdown cover

We understand that every business is unique. If you want the peace of mind that COSHH compliance is one less thing for you to worry about, then we can take care of it for you.

LOCAL EXHAUST VENTILATION (LEV) TESTING

What is LEV testing?

LEV Testing is the process of thoroughly inspecting and evaluating a local exhaust ventilation system against the commissioning report's performance, industry standards, and HSE guidelines. It includes airflow and pressure measurements, as well as checks on the effectiveness of contamination exposure control. All equipment, including hoods, filters and ducts, is also subject to additional inspections.

Why do you need LEV testing?

All employers who use LEV systems are required by law to keep them in good working order and to have them thoroughly examined and tested by a competent person at least once every 14 months (or more frequently depending on the application).

What does Filtermist offer?

Our P601, P602, and P604 qualified engineers perform COSHH compliant LEV testing for systems that control contaminants such as oil mist, dust and fume.

We provide reports in digital format which make them simple to file and retrieve whenever needed. We will make recommendations if your system falls short of the required standard. All work is done in accordance with HSG258 - the HSE guidelines that govern LEV testing.

AIR MONITORING AND SAMPLING

Air monitoring and sampling is used to determine the level of contaminants in the air and to ensure control measures are working and your employees are breathing air which is clean and safe.

Filtermist can offer the following air monitoring:

- Static monitoring - assesses air quality in a specific area.
- Personal monitoring - samples air in the operator's breathing zone.

Filtermist offers the following air sampling: termistStatic tests in and around the work area.

- Personal air sampling close to your worker's breathing zone - this method tests for airborne substances that may be inhaled when a worker undertakes a particular task.

SERVICING AND MAINTENANCE

What is servicing?

Regular preventative maintenance improves the performance of industrial air filtration and extraction equipment and systems. In order to keep your LEV systems in good operating order, they must be serviced on a regular basis. Our experienced engineers service all makes and models of oil mist, dust and fume extraction equipment in addition to our own Filtermist and Dustcheck branded LEV products.

Why do you need it?

The benefits of regular servicing of LEV systems results in:

- Increased system efficiency
- Less production downtime
- Reduced long term costs
- Better protection for employees
- Resolves issues before they become a serious problem
- Help pass LEV tests

What does Filtermist offer?

Maintenance visits include internal and external inspections of all LEV equipment, checking for wear and tear, cracks, defects, and poor filtration. Our Service Engineers can also review the process and ensure the extraction system is still operating as well as it did when it was first installed. If it's not operating at its best, our engineers can diagnose the problem and recommend and implement changes to get your equipment back in working order.

In addition to Filtermist, Absolent and Dustcheck units, we also service a wide range of LEV systems from other brands including ACS, AirBench, Boffa, CleanMist, Kemper, Losma, Nederman, Purex, Reven and Smog-Hog.

SPARES AND CONSUMABLES

Why are spares and consumables important?

Spare parts are critical assets for maintaining high productivity. Having spare parts on hand immediately minimises downtime and allows you to meet or exceed your goals and deadlines.

What do we do?

Filtermist provides genuine and original spares for all of our own product lines (Filtermist, Dustcheck and Kerstar), as well as spares and consumables for other manufacturers' LEV equipment. Stock agreement orders can be arranged.

Why is it important to use the original spares for your equipment?

- Equipment runs efficiently
- Lower lifetime costs
- Safety
- Quality
- Matches equipment specifications
- Reliability

WE ALSO SUPPLY A WIDE RANGE OF SPARES AND PRODUCTS INCLUDING:

- Non-woven filter material
- Depth filters
- Pleated cartridge filters
- Pleated panel filters
- Filter bags
- Envelope filter bags
- Filter housings
- Pocket bag filters
- Rigid bag filters
- Paint stop filters
- Controllers
- Diaphragm valves
- Solenoid valves
- Mixing valves
- Pressure gauges
- Spares for, and replacement wing and jet cleaning systems
- LocLine modular coolant hose
- Pneumaster coolant pumps
- Tramp oil skimmers
- Vacmaster air guns

24HR EMERGENCY BREAKDOWN COVER

As a UK manufacturer ourselves, we know how important it is to minimise downtime. This is why we offer all of our customers access to our 24 hour emergency breakdown cover
...completely free of charge!

If you wish to take advantage of this peace of mind you'll just need to sign an agreement confirming the following:

- Critical spares are held on site
- LEV systems are serviced at least once a year by Filtermist Service Engineers
- LEV systems are tested at least once every 14 months by a competent person

Benefits of our breakdown cover include:

- Peace of mind
- Quick response
- Flexibility
- LEV systems are maintained
- No waiting for critical spares
- Expert support
- Reduced production downtime

You'll have access to a 24-hour telephone helpline and one of our engineers will be with you within six hours to get your extraction system up and running again.

All charges are totally transparent from the outset - you only pay for what you use. So, if you never need us, you won't pay a penny.
