

Steven brings seven years of oil mist extraction experience to Filtermist

UK OEM and Key Account Manager Steven Broadhead joined Filtermist's oil mist team in January 2026.

Former CNC Mechanical Engineer Steve has worked in the UK's oil mist extraction industry since 2019 - he is well-known within the industry and has a wealth of applications experience.

“ My role is to provide dedicated support for our UK based Machine Tool Manufacturers and Distributors to ensure they receive a first-class service, and their customers benefit from workplace air which is clean and safe to breathe. ”

Yorkshire based Steve spends much of his time on the road visiting customers throughout the UK. His remit is to make sure that they offer the best mist extraction unit for specific applications to their customers.

“Working as a technical partner with OEMs brings different challenges than working with end-users – mainly due to the volume of machines that require extraction,” comments Steve. “We also have to consider transportation as some extraction units are fitted at the OEM site before being transported to the end-user.

“As well as our own brand of UK manufactured oil mist filters, Filtermist is also the UK distributor for oil mist and oil smoke filters from our sister company Absolent AB. Filtermist units are suitable for most oil mist extraction requirements, but some processes need higher levels of extraction efficiency – this is where Absolent products come in. By offering both brands we can ensure customers access the best extraction solution for their individual requirements.”

Steve is an avid gym-user and when not working or working out he enjoys spending time with his family.
