## STAR RELEASE BRAND NEW TECHNOLOGY!

Star GB are delighted to invite you to our Autumn 2014 Open House which will take place on the 14th, 15th and 16th of October (late night on Wednesday). The event welcomes visitors from around the UK and showcases the latest technological breakthroughs in the industry. Star's line up of 7 machines includes the ST-20, a 20mm triple turret sliding head lathe; the SW-12RII, an efficient twin platen machine; and the versatile new SB-20R Type G, with advanced capabilities that make it the pinnacle of its class.

Watch a summary of last year's event where several new machines, including the SV-38R, SB-12R, and SB-20R were given their UK debut.

This year, we have our largest ever number of partners attending, including Fanuc exhibiting their LR Mate 200iD mini robot, J2com demonstrating various PC software tools from developers CIMCO, and CNC Data will be showing their machine monitoring software. In addition, Star GB are delighted to welcome several new partners whose displays will be making their debut appearances alongside some of our other long-standing partners. They will be on hand to display tooling, cutting fluids, and other ancillary products offered to complement Star machine solutions.
